

PASSMAN

ENTERPRISE PASSWORD MANAGEMENT MADE SIMPLE

PassMan can store passwords encrypted, hand them out based on permissions and change them automatically if needed! All actions are traceable which helps you comply with the GDPR requirements!

WHAT IS GDPR?

GDPR (General Data Protection Regulation) is the new data protection regulation of the European Union that will provide more control to users over their personal data. It will come into force on 25. May, 2018 and will bring lots of changes into the way companies handle personal data and manage passwords.

WHAT IF YOU DON'T COMPLY?

Since this regulation is mandatory for all companies that handle personal data of EU citizens, it is also a must for you to comply. If you don't, you can be fined up to 20,000,000 EUR or up to 4% of the annual worldwide turnover of the preceding financial year, whichever is greater.

How does Passman help you comply?

ENHANCED PASSWORD ENCRYPTION

Instead of storing passwords on papers and in old-fashioned physical safes, we introduce the new digital password safe! In this safe we can store our passwords, private and public keys encrypted (AES256).

AUTOMATIC PASSWORD GENERATION

Besides storing passwords safely, PassMan is capable of generating new and strong passwords automatically, so we don't have to figure out new ones and we can be sure that they comply with the company's policy!

SECURE LOGGING IN

PassMan integrated with Balabit PSM can let our sysadmins work without knowing the passwords for the systems they are responsible for! It is also possible to record a video of their activity.

ADDITIONAL FEATURES

FAST CONFIGURATION

It only takes 10 minutes to set-up and start PassMan. The list of passwords can be imported within minutes, the final configuration can be done within a few hours!

MONITORED USER ACTIONS

With the help of PassMan you will know when and which user requests a new password or changes an old one on a particular system. This traceable approach helps the auditors and reduces the length of the audits.

HIGH AVAILABILITY

The architecture of PassMan is set up to be available most of the times. It contains a 3-membered cluster group which can still operate if a double error occurs.

SECURE DATA TRANSFER

PassMan uses SSL protocol to ensure secure data transfer between server and client.

EMAIL ALERTS, NOTIFICATIONS

PassMan can send you alerts and notifications, so you can prevent any potential damage.

AUTOMATIC ACCOUNT CONTROL

PassMan can check the statuses and the availability of the handled accounts automatically.

ENHANCED PERMISSION CONTROL

PassMan has an enhanced permission control system (with AD integration) built in it, so you can make sure that users can only see what they have to.

NO NEED FOR INSTALLATION

There is no need for installation in case of PassMan since the virtual machine has every needed component pre-installed (operational system, database handler, etc.).

MICROSOFT AD INTEGRATION

User authentication can be done with Active Directory which reduces user administration costs. In case of network error or AD outage, local admin access is available.
