Transfer of system database and settings from version 4.1.1 to 4.2

Preconditions: Padmin 4.1.1 on the source system and the target system 4.2

Download the database from the 4.1.1 system:

Enter the Padmin of the source system (open the page source_system_name/padmin), then select the Data Backup/Export menu. After that, click on the Backup Database option. Here, name the database you want to save. Then press the run button.

PADMIN 41.1-2	2590

Maintenance + Data Backup/Export + System Settings +	Backup Database Restore Database Download Database File	Filename Enc password		\$
System Statuses > Logs >	Upload Database File Delete Backup Auto Backup PassMan Readonly PassMan Writeable Download System Settings Upload System Settings		RUN	

Next, click on the small arrows next to the Filename field, choose the previously named, and in the field below, provide a password of at least 12 characters containing both lowercase and uppercase letters, special characters and numbers. **It's important to remember this password** as it will be required to use the file later. Afterward, click on the run button, and the database will be downloaded as a file to your computer.

Save System Settings:

Choose the Download System Settings option in the Data Backup/Export menu.

Data Backup/Export+ System Settings+ Security Settings+ System Statuses+ Logs+	Backup Database Restore Database Download Database File Upload Database File Delete Backup Auto Backup PassMan Readonly PassMan Writeable Download System Settings	Enc password	RUN

Next, provide a password of at least 12 characters, including both lowercase and uppercase letters, special characters and numbers. **It's important to remember this password**, as it will be required to use the file later. After clicking on the run button, the system settings will be downloaded in a file.

Database Upload to the 4.2 System:

Access the Padmin of the target system (target_system_name/padmin), then in the Data Backup/Restore menu, select the Database Upload (full) option.

**** PADMIN ****	DEV-2581			
Dashboard Certificate		L	Jpload database (full)	
Data Backup/Restore > System Settings > Security Settings > System Statuses >	Backup Database Restore Database Download Database (Full) Upload Database (Full)	Db dump file Sm control dump file Sm data dump file	Choose a file Choose a file Choose a file	Browse Browse
Logs+	Delete Backup Auto Backup Settings PassMan Readonly PassMan Writeable Download System Settings Upload System Settings	Enc password	RUN	

Browse to select the database file that you previously saved on your computer, then enter the associated password in the "Enc password" field. Afterward, click on the run button, and the database will be uploaded to your system but won't be active yet. To activate it, go to the Data Backup/Restore menu and select the Restore Database option.

Data Backup/Restore > System Settings > Security Settings > System Statuses > Logs >	Backup Database Restore Database Download Database (Full) Upload Database (Full) Delete Backup Auto Backup Settings PassMan Readonly PassMan Writeable Download System Settings Upload System Settings	Filename	RUN	¢

Click on the small arrow next to the Filename field, choose the previously uploaded database, and then click on the run button. Then your browser will immediately prompt you with a pop-up window to confirm your intention. Once you confirm, the database will become active on your system.

System Settings Upload to the 4.2 System:

Choose the Upload System Settings option in the Data Backup/Restore menu.
